

BlueTest2 Software Release Note 1.2.10

Overview

Anritsu maintain a policy of continuous development and enhancement of instrument software. This software release note defines the latest enhancements to the BlueTest2 software package and details the change history of the software.

Change history

Changes in 1.2.10 relative to 1.2.9

1. Support for MT885xx Testers with firmware versions that include letters.

Changes in 1.2.9 relative to 1.2.7

1. Correction of a display issue where the EDR Maximum Input test on the 'Run Bluetooth Test' tab could be incorrectly disabled.

Changes in 1.2.7 relative to 1.2.3

1. For use with MT8852B Testers that have 4.14.000 or later software installed and with option 23 EPC or option 27 Bluetooth low energy enabled.
2. BlueTest2 1.2.7 has been verified for installation on PCs running Windows Vista. The supported operating systems are Windows XP and Windows Vista.

Changes in 1.2.3 relative to 1.2.2

1. BlueTest2 1.2.3 uses the National Instruments VISA runtime library to communicate with the MT885xx testers. The NI Visa runtime library is located on the product CD or included in the software download package.

1.2.10 – known limitations

There are no documented issues with this software release.
